About KOMtech

**1** Chairman's Message

**3** Editorial Note

**5** Offshore Wind Turbine Installer

A new vessel concept which provides safe operation and allows installation in a larger weather window

**19** Foundation Structures for Offshore Wind Turbine

Jacket structures designed for water depths greater than 30 metres and suitable for mass production and installation

**27** Electrical Power Transmission Schemes for Offshore Wind Farms

High and medium voltage alternating current schemes and high voltage direct current schemes are options for connecting large scale offshore wind farms to the main electrical grid onshore

**35** Self-Installing Substation for Offshore Wind Farm

An alternative substation platform concept for large scale offshore wind farms

**43** Control system for Rotaset Racker Vertical Pipe Handling System

Developed for safe and easy operation, the control architecture is robust so as to ensure minimal downtime

**51** Robust LNG Process for Flexible Associated Gas Feed Conditions

An improved LNG process to handle fluctuating flow rates, substandard natural gas composition and high levels of heavy hydrocarbons

**57** Conceptual Development of a Slim Drillship

A new design equipped with a mast to carry the top drive and hook load, enabling easy access for intervention equipment directly to the well centre

**69** CFD for Prediction of Current Load on Drillship

A new computational approach for the calculation of current forces

- 75 Disconnectable Mooring System for Ice Class Floaters**  
To allow for quick and safe disconnection during emergencies
- 81 A New Method for Tank Cleaning** Bio-OSR is a safer and more environmentally friendly alternative to conventional tank cleaning agents
- 89 Fullscale Ice Trial of Icebreaker “Varandey”** A brief account of the successful ice trial conducted on Varandey icebreaker by Keppel Singmarine
- 95 Topside Unit Operations Design Made Easy** The development of a suite of mini calculators with smart data selection for topside design

## Editorial Note

Following the success of the inaugural Technology Review in 2009, this publication highlights some continued research as well as some new research directions of KOMtech. The mini LNG concept and the Rotaset Racker pipe handling equipment reported in the 2009 review have been further developed. In addition, a number of papers in this issue report new areas that KOMtech is pursuing, such as offshore wind and drillship design.

These papers present a snapshot of the ongoing work in KOMtech and are intended to stimulate further thoughts and innovations and to showcase some of the many competencies available and being developed in KOMtech. Every attempt has been made to ensure accurate and factual representation of the research presented, however it is important to note that much of this work is ongoing and represents the opinions and views of the authors and not necessarily an official position of KOMtech.

Good research can never exist in isolation, and thanks must go to our collaborators in Keppel Business Units, Universities and Industry who have contributed to our research and to the papers presented in this publication. Striving to maintain, or exceed the standards set by the first issue of the Technology Review has been the mission of this editorial committee. Technology Review 2010 is the result of many hours of hard work from the authors and editors, and I would like to thank all involved for their hard work and support.

**Michael Perry**  
Chairman, Editorial Committee

---

### EDITORIAL COMMITTEE :

Advisors	Mr Charles Foo and Dr Foo Kok Seng
Editorial members	Dr Michael Perry, Dr Saeid Hosseini, Mr Chia Meng Hwee, Mr Terence Chin, Mr Chan Chee Long, Mr Thomas Khor, Ms Shelvi and Ms Wong Chai Yueh
